Rev d 5-7-02

PRODUCT IDENTIFICATION

Date: January 29, 1999

Product Name: **BufferMount**

Thank you for your inquiry about our products. The material we supply you, BufferMount, in the form of adhesive coated products, is considered by OSHA Standard 29, Part 1910,1200 as an "article".

An "article" is a material formed to a specific shape or design during manufacturing which has end use functions dependent, in whole or in part, on its shape or design during the end use and does not release or otherwise result in exposure to the chemical under normal conditions.

It should be noted that in the case of combustible materials, which under normal circumstances are chemically inert, carbon dioxide, carbon monoxide and other chemicals may evolve from products of combustion should fire occur. It is recommended that in this instance self-contained breathing apparatus and full protective clothing be used by fire-fighters. In addition, it is also suggested that fire fighting procedures include the use of dry chemicals, carbon dioxide, water, fog and/or foam as extinguishing agents.
